Descriptive list of *African Violets***GORGEOUS****Patent #770****ST. PAULIA,
GORGEOUS**

SAINT PAULIA GORGEOUS - Patent applied for. This flower is truly what the name implies. The upper surface of the leaves are green with the lower surface being white and variegated with violet pink. This variegation is most pronounced in the younger leaves and almost disappearing in the larger ones. The form of the mature leaves with wide upwardly and inwardly rolled margins gives the leaves a spoonlike shape. This gives the plant an outstanding distinction among your other varieties. The flower is a very free bloomer. Color - Chinese Violet by Ohio State University, or Rose Lilac with darker markings.

SAINT PAULIA PINK GIRL - Patent applied for. The leaf is heart shape with round crested serrated edge. Uniform green color, with a cream spot at the base of each leaf, similar to Blue Girl. The flower is pink somewhat deeper than Pink Beauty. The two most upper petals are larger, having a slight ruffled edge and a tendency to curve inward, more so as the flower gets older, filling in the space between the three lower petals thus giving the blossom a cup like fuller appearance.

The two new varieties are \$2.00 each, prepaid, special delivery. 2 $\frac{1}{4}$ " pot size, ready for 3" pots. No air mail, no wholesale or quantity orders.

Patent is applied for on these two varieties and there will be no propagating rights given. Anyone giving, selling or reproducing these plants under their name or any other name, will be liable for the full retail price of the plant. Your ordering of these plants will be that you agree to abide by the Patent Law. Since one (1) plant does not travel well in shipments, no one (1) orders are taken. We are running a mail order business only--No sales made at the Greenhouse.
